

NATURE'S WAY OF SAYING, "BON APPETIT!"

Pasture fed is better. The better the pasture the better the feed. SucraSEED makes the very best pasture possible. How can we make such a bold claim? Simple. SucraSEED pasture mixes are made with High Sugar Grasses (HSG) — the same perennial ryegrasses that have been improving pastures and livestock production in Europe and New Zealand for more than a decade.

High Sugar Grasses, found exclusively in the SucraSEED mixes, were developed for farmers wanting to get the most from their pastures. The grasses' high sugar reserves make lush, thick pastures that withstand hot, dry summers and biting, cold winters. It also gives them the extra energy to re-establish quickly after grazing and to crowd out weeds. Most importantly, though, HSGs are proven to increase livestock yields. That's more milk, beefier cattle and larger sheep and goats.

sucra seed[™]
Sugar is good

Reap the Benefits of SucraSEED:

- Non GMO/Qualifies for Organic Certification
- Reduced Nitrogen Emission
- Higher Dry Matter Intake per Head per Day
- Increased Livestock Production:
 - Up to 20% Higher Daily Live Weight Gains
 - Up to 6% More Milk per Cow

SucraSEED[™] is a product of Grassland Oregon.
